Subject: Request for Permitting Forms - Lithium Extraction

John Shavers called me today and said they are in final negotiations with Magcorp folks to go ahead with a proposal to extract lithium from a waste product that Magcorp produces as part of their magnesium production.

I spoke with him a year or so ago and never heard back since. Thought he'd had second thoughts about all the permitting requirements. He apparently plans on using a parcel of land that Magcorp owns to set up their extraction plant (2+ acres) and solar ponds (@50acres).

He has asked for our permitting forms and regulations. Please send a copy of same to him at:
